About AminAvast®

AminAvast® is a nutritional supplement to help support normal kidney function in cats and dogs.

AminAvast® is safe with no reported side effects.

AminAvast® is a combination of naturally occurring amino acids and a peptide that support the kidney health of cats and dogs. The amino acids also help support overall health and vitality of your animal as well as your pet's coat.

Research Supporting the Effectiveness of AminAvast®

Summary:

One-hundred twenty-four (124) cats were enrolled in an open ended study and received **AminAvast®** for 2 years. Also, a smaller (59) feline study and a small canine study have been performed and published. The supplement was well tolerated and was shown to support kidney health. If you are a consumer, please talk to your veterinarian about whether supplementing with **AminAvast®** might be right for your cat or dog.

FAQ

1. How long should my cat or dog be on AminAvast®?

Because **AminAvast®** is intended to support the health of your pet it should be taken on a daily basis for their entire life.

2. Is AminAvast® Safe?

Yes, **AminAvast®** has been given to animals over two years in three clinical studies and we have not received any reports of adverse effects during the study, either symptomatic or hematological. There have been no reported adverse effects since its commercial release.

3. My pet is on other supplements and medications. Can I still give her AminAvast®?

We are unaware of any contraindications between the ingredients in **AminAvast®**

or any other dietary ingredient or medications. However, be sure to discuss possible interactions with your veterinarian.

4. How do I administer AminAvast®?

Cats and dogs will eat **AminAvast®** with no hesitation and **AminAvast®** is very easy to administer. Simply open the capsule and mix with food. Most cats and dogs will eat **AminAvast®** in their normal food. For finicky animals or those whose appetite is decreased, we suggest mixing the contents of the capsule with about 1 tablespoon of a special food (a food the animal never gets is a great choice as they will be excited to eat it). Another option is to mix the contents of the capsule with a little tuna water and let the cat lap it up. For dogs, you may also hide the capsules in a treat such as peanut butter.

5. Have there been any clinical studies?

There was a very comprehensive two-year clinical study involving 124 cats. All individuals in the study benefited by taking **AminAvast®**. Also, a smaller (59) feline study and a small canine study have been performed and published. Talk to your veterinarian about whether supplementing with **AminAvast®** to support the health of your pet might be right for your cat or dog.
